

## IR Time to Case

- **Emergent:** Patient is hypotensive (SBP<90), 2 units of blood products with transient response, and a lesion that is amenable to embolization.
  - **Time: <60 minutes**
- **Urgent:** Active extravasation without hemodynamic instability (SBP>110), or stable after maximum 2 units blood transfusion.
  - **Time: 6 hrs**
    - Traumatic pseudoaneurysm without extravasation in stable patient
    - **Time: 6 hrs or first case the following day**
- **Standard:** all other cases in which IR is consulted that do not meet the above categories.
  - **Time: per routine**
