

## Seizure prophylaxis in TBI

General indications for seizure prophylaxis in traumatic brain injury:

- Cortical contusion
- Acute SDH
- Acute EDH
- Penetrating head injury
- Depressed skull fracture
- Post-traumatic seizure
- Extensive SAH

7 days of antiepileptic prophylaxis, Keppra is the AED of choice. If seizures occur between 24hrs and 7d after the trauma, patients should be treated with AEDs long term afterwards, along with Neurology consult.
